

Welcome to thesupportdirectory

thesupportdirectory is a powerful new directory system for support and community care services in the UK. thesupportdirectory is a cost-effective and user-friendly alternative to existing directory systems for organisations of all sizes. It can be used as a web site in its own right or can be integrated with your existing web site.

thesupportdirectory makes it incredibly easy for website visitors to find the information or service they are looking for. Along with postcode and map searches, users can either browse through a list of keywords or can use the advanced type-in search, which automatically recognises many common words, correcting most errors and supplying alternative phrases where applicable. The results page is clearly presented, and includes links to related information documents. It's **intuitive**, **powerful** and **accurate**.

thesupportdirectory is also very easy to update. Thanks to its user-friendly content management system, very little training is required to edit directory listings and web pages. Website visitors can also submit their own entries, with all changes and additions subject to approval by the directory administrator.

thesupportdirectory is not just an online directory. It also includes the new version of our specialist book compilation software, Directory Publisher, which allows you to generate up-to-date, branded hardcopy directories. The system generates PDF files complete with front cover, chapters, page numbers and index, and these can be printed locally or by a professional printer.

Features include:

- Database preloaded with over 500 factsheets from Mind, Age Concern, Help the Aged, Community Legal Advice and many other sources.
